Basic Functions

Pursuit of Visibility

The anti-reflection filter provides wide and clear field of view. This reduces the sense of fatigue due to a long-time use.

Pursuit of Usability

The streak can be easily set at the best position. The rotation and the width change of the streak are separately controlled. Rotating the streak does not affect the streak width. The lightweight retinoscope head rotates freely.

Endless Rotation of Streak

The streak rotates 360 degrees. You can rotate it from any position and is useful for measurement of the axis of myopia. Furthermore, the retinoscope is equipped with the Head Attachment Mount for eyeglasses wearers and the feature to attach a presbyopia lens easily.

Sharp Streak Light

The precision cut slit realizes the sharp and clear streak light.

Fixation Card Set

The Fixation Card Set is available for use in dynamic retinoscopy. Consists of two fixation cards and a card holder. (Optional)
